

Date: March 26, 2025

Time: 3-4:20pm

Location: LEEP G438

Objective: start working on part 4 of the project: logical relational model

Team members present: Alexandra, Sophia, Riley, Timo, Brandon and Vivian

Task Completion Confirmation:

- Timo: None
- Sophia: None
- Brandon: email the TA's
- Allie: None
- Riley: None
- Vivian: none
- Timo: none

Brainstorming Session:

- Allie got to set up the document for part 4 to give us a head start
- We decided to add status whether an item is paid or unpaid
- Allie based off the data description in part 3 to set up the data dictionary
- Timo decided to make the schema diagram in Canva
- Brandon went up to the whiteboard to draw relational schema diagram (e.g., users, is a) using the ER diagram as reference
- Vi gave us an image representation of primary and foreign key to help us out
- Brandon and Allie looked at the difference between functional requirements and dependencies
- Timo make sure that the data dictionary of attribute names had underscores just in case the words were spaced
- Brandon write an email to the TAs about if the data dictionary needs to be combined or does each table need a separate dictionary

Tasks Allocated:

- Timo: work on document (due March 30)
- Sophia: Upload meeting notes and work on document (due March 30)
- Brandon: work on document (due March 30)
- Allie: work on document (due March 30)
- Riley: work on document (due March 30)
- Vivian: work on document (due March 30)
